

Figure 3: Scatter plot showing the relationship between the number of species (Y-axis, 1-7) and the proportion of species (X-axis, 0-1). The plot is divided into two regions: a purple region (left) and a green region (right). The legend indicates the number of species for each region: (n=59) for the purple region and (n=32) for the green region. The correlation coefficient (r) and p-value (p) are shown for both regions.
